

Miron Mutyaba | Senior Designer
Ing. arch.

Profile

Miron has joined the office in 2012 and was mainly involved in major mixed use and residential projects. He has been interested in parametric design for over a decade and specialises in new techniques of advanced modelling applied especially in the design and rationalization of complex facades.

Education & Teaching

Miron studied architecture at University of Brighton and BUT Brno where he graduated in 2008. He has been interested in the new techniques of parametric design and advanced modelling for over twelve years and attended number of SmartGeometry workshops since 2005.

Projects

Since 2012 he has worked on Morpehus, 150.000 m² tower hotel, from schematic design to construction documentation phase. He was responsible for developing parametric systems for design and rationalization of highly complex exoskeleton and free-form the façade. The project is currently under construction and will be completed in 2018.

Currently he works on an complex of six mixed-used and residential towers in Taiwan. During his previous engagement in the office in 2007 he was involved in major mixed use project Signature Towers, Dubai and winning competition for Innovation Tower Hong Kong.
